- 5. Limitations
- 6. APPENDIX: List of Tables
  - 6.1. Table 1:
  - 6.2. Table 2:

#### 1. Introduction:

### 1.1 Background

DocApp provides an Online Doctor Appointment system for the users to book appointments.

### 1.2 Purpose

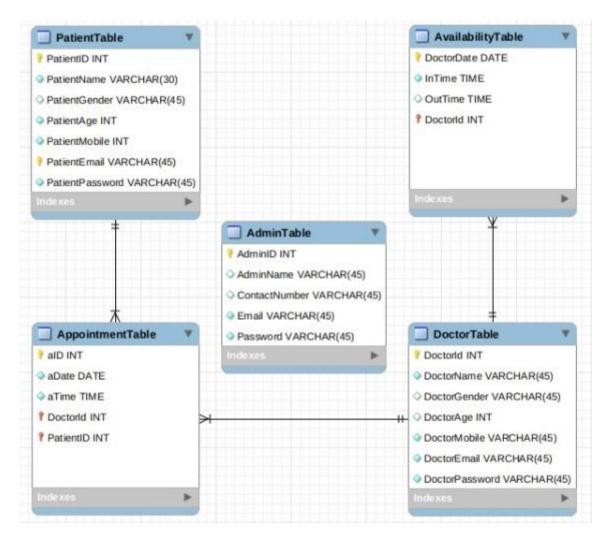

DocApp plans to develop "Online Appointment System" - a CLI application where patients will be able to fill in their details just and easily set up an appointment with the doctors based on a time-slot.

### 1.3 Scope

The scope of the DocApp will be to provide the functionality as described in the <u>Functional</u> <u>Requirements document</u>. The system will be developed on a Windows 10/Linux machine using Java, JDBC and MySQL.

### 2. Global Data Structures and Shared Data Functions

This section describes the structure of n tables to be used for the implementation of requirements as stated in the specification. Refer APPENDIX for detailed table structure.

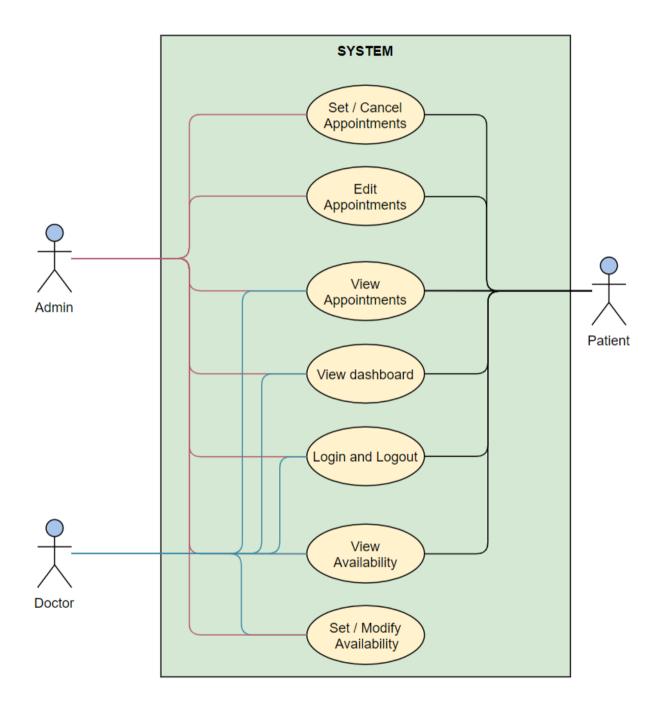

## 3. High Level Design

This section describes the high level design diagrams Use case diagram with Use Case definition, Sequence Diagram and Class Diagram which provides a visual representation of the requirements , logical flow and their class representations.

## 3.1. Use Case Diagrams

The requirements of a system can be represented using a use case model in the Use Case Diagram. The use case diagrams for the actors of this case study are given as below.

## 3.1.1 Use Case Diagram for Admin, Doctor and Patient

# 3.2. Use Case Definition

Generally, in a design document, Use case definitions should be written for all the *Requirements* of the system. Below shown Use Case Definition "Admin cancels Appointment" is the use-case definition.

# **3.2.1 Cancel Appointment Details**

Admin norforming dolate on	aration on	Doc-001		
Admin performing delete operation on Appointment Details. <b>USE CASE</b> #		DOC-001		
<u> </u>	43E #	The advantage	ould be able to	
Goal				
Preconditions			I the Appointment.	
Preconditions		1 '''	should be present in the	
Success End Condition			l admin should be logged in.	
Success End Condition		1 ''	should be deleted from the	
Foiled Fud Condition		+	oper message is shown.	
Failed End Condition		_	Appointment details in the oper message is shown.	
Primary Secondary Actors				
	Primary, Secondary Actors		Primary: Administrator	
Trigger		Admin Initiat	•	
DESCRIPTION	Step		Action	
1		Click on the "	View Appointments' option.	
2		Enter Appoin	tment ID to view a specific	
		detail or View	v all Appointments. The	
		details with d	lelete/modify option are	
		shown.		
3			lelete option. Confirmation	
		message is sh		
4		Select the ID	to be deleted.	
Step		Branching Ac	tion	
1		Enter invalid	FlightID.	
2		Select Cancel	on confirmation.	
		Appointment	details are not deleted.	
Related Information/Use ca	ses	( <i>Doc-002</i> ) Ad	d Appointment Details.	
Priority		P1		
Performance		1	ng user input)	
Frequency		Once in a we		
Assumptions			plemented and	
		1 ''	s exist in DB and Admin	
		could login su	uccessfully.	

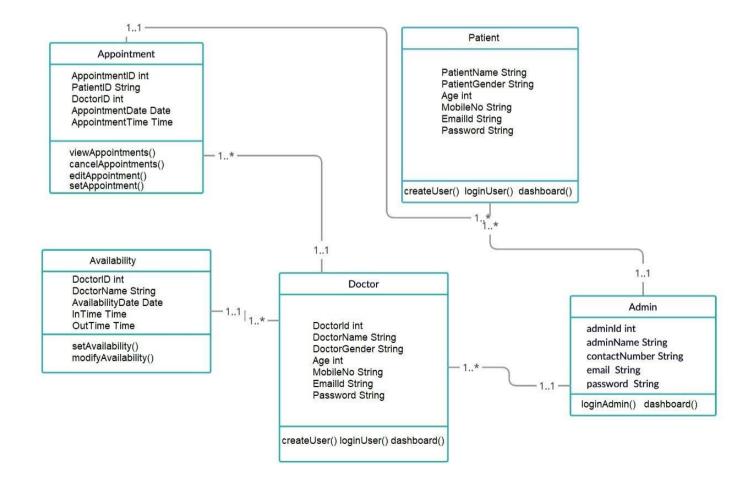

# **3.2.2** Add Appointment Details

Patient performing Add Flight Schedule operation USE CASE #	Doc-002
Goal	The patient should be able to add schedule details.
Preconditions	Patient should be successfully logged in.
Success End Condition	Appointment Schedule is added in the database and ScheduleID should be auto-generated.
Failed End Condition	Failure in adding Appointment Schedule information.

Primary, Secondary Actors		Primary-Administrator	
Trigger		Patient Initiative	
DESCRIPTION	Step	tep Action	
1		Click on the 4	Add Appointment' option.
2		Enter valid Doctor ID and Schedule	
		information.	
3		Click on Add Appointment option.	
Step		Branching Ac	tion
1		Enter invalid/	Incomplete Schedule
		information.	
2		Click on Add Appointment option.	
Related Information/Use ca	ases		
Priority		P1	
Performance		2 secs (excluding user interaction)	
Frequency		Once every 2 days.	
Assumptions		Patient and Doctor exists in the DB.	

## 3.3. Class Diagram

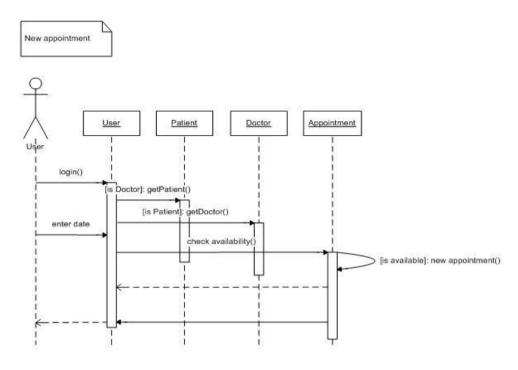

The class diagram is a very basic concept in an object-oriented world. Class diagrams demonstrate a model, describing what attributes and behavior it has rather than describing the methods for accomplishing operations. Class diagrams are very useful in representing relationships between classes and interfaces.

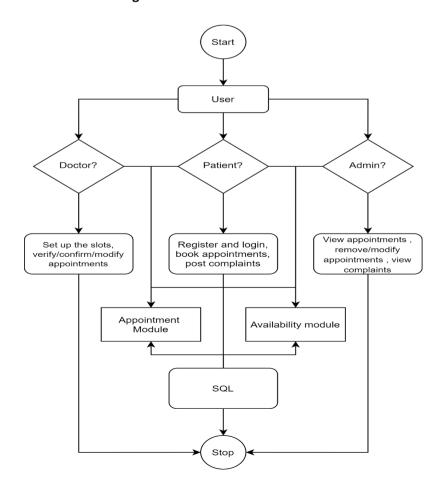

## 3.4. Sequence Diagram

A graphical representation of a module's function invoking functions of other modules in order to achieve a task (specific user requirement) is called a sequence diagram. A sequence diagram for the add process is given below for reference.

# 3.4.1 Patient adds new Appointment

# 3.5. Overall working Flowchart

## 3.6. Classes

This section provides a brief outlook on the respective classes to be used for the implementation.

Class Name	Attributes	Data Type	
Patient	PatientID	Int	
	PatientName	String	
	PatientGender	String	
	PatientAge	Int	
	PatientMobile	Int	
	PatientEmail	String	
	PatientPassword	String	
Doctor	DoctorId	Int	
	DoctorName	String	
	DoctorGender	String	
	DoctorAge	Int	
	DoctorMobile	String	
	DoctorEmail	String	
	DoctorPassword	String	
Admin	AdminID	Int	
	AdminName	String	
	ContactNumber	String	
	Email	String	
	Password	String	
Availability	DoctorDate	Date	
	IntTime	Time	
	OutTime	Time	
	DoctorId	Int	
Appointment	alD	Int	
	aDate	Date	
	aTime	Time	
	DoctorId	Int	
	PatientID	Int	

# 3.7. UI Templates

# 3.7.1 UI Principle

The UI [ Presentation Layer ] should be designed with the below mentioned principles which helps easy interaction by the user to the application.

# 3.7.2 UI controls and Usage Principle

The below table provides information on the UI Controls. Based on the User Interface type, the corresponding controls can be used to receive the user input.

UI Type	Controls	Description
Entry	CLI inputs	Operations like inserting
		details to the databases
Decision Control	Case Options	Operations like selecting the
		functionalities or users
Table View	CLI inputs	Operations like viewing
		appointment and availability
		tables.

## 3.7.3 UI Template

This section contains the design template for the dashboard [Fig. 1] that will be displayed at the time of start of this application and actor specific area[Fig. 2].

```
----Welcome to the Online Doctor Appointment-----***
**Enter the type of User:
1) Admin
Doctor
3) Patient
4) Exit
**Enter your choice: 3
*-----*
1) New user registration
2) Existing user/login
Enter Your choice:
         -----*
Enter Email_ID:
patientb@gmail.com
Enter Password:
Patient login is successful..
*** Welcome to the Online Appointment PatientB !!
Enter the option:
1) View my appointments
2) Add an appointment
3) Remove an appointment
  Exit
```

Fig. 1

```
Enter the option:
1) View my appointments
2) Add an appointment
3) Remove an appointment
4) Exit
 ***The list of all the available doctor dates (order by Date):
     Doctor_ID
                                          In_Time
                                                            Out_Time
                  | Doctor_Date |

                                                                            Fig. 2
```

## 4. Critical Functions and Focus for Testing

viewAppointments(), editAppointments(), setAppointments(), cancelAppointments(), viewAvailability(), setAvailability(), modifyAvailability()

### 5. Limitations

- Administrator cannot register. Hence, the admin's profile has to be maintained at the backend.
- CLI restricts the user friendliness.
- Dynamic notification system is not implemented.
- Waiting list for patients are not implemented.
- Customer's credit card details have to be already entered in the database.

#### 6. APPENDIX
